OVERVIEW

I have a good predisposition for teamwork, tackling tasks with commitment and attention to the supervisor's instructions. I am curious and eager to learn, always open to discussion, sharing ideas, and constructive criticism.

CAREER

Full stack developer

Ready2Use | august 2021 - present

- Development of a web app called “**Heritour**” using **React Remix** and **SpringBoot**, aimed at enhancing tourism promotion and monitoring the real-time conservation status of cultural heritage through the use of on-site sensors.
- Provided consultancy for **Team System** on the **Presenze/Polyedro/AllInOne** project, aimed at improving personnel management and related timesheets. The languages used were C and C++. Work and tasks followed an agile methodology.
- Development, using **Angular** and **Laravel**, of an internal application for the monthly compilation of timesheets, subjected to an approval workflow by the supervisors. An XML export functionality was implemented to integrate with “**My Infinity Portal**” in order to automate the payroll calculation.
- Development of the “**Food Lovery**” project, which includes three **Ionic/Angular** mobile applications (Foodlovery, Foodlovery Partner, Foodlovery Driver) and a **Angular** web app. Backend development was done using **NestJS**.
- Development for “**Engineering**” on the “**Vdesk**” product, using **Angular** and **Laravel**, of a plugin designed to manage tasks with recurring deadlines on a monthly or annual basis.

Web developer

Goon Italia | january 2020 - august 2021

- Development of a WordPress plugin for **Lisciani Giochi's** website that allows synchronization of the user database with a main centralized external database.
Implementation and development of a wishlist plugin.

Full stack developer

Freelance

- Development of a web app using **SvelteKit** and **SpringBoot**, aimed at the recruiting section of a company, which allows users with the appropriate roles to create questions (multiple-choice, code snippets, open-ended questions) on specific topics and seniority levels. Recruiters have the option to generate a quiz defined by multiple categories and a seniority level to filter questions that can be manually associated or automatically provided by the system. An URL can then be generated to be sent to the candidate, who will complete it, and the responsible person will be able to view the responses.
- Development of the “**MeMoto**” application in **React Native**, available on Google Play and the Apple Store. It allows motorcyclists to register their bikes and associate expenses or maintenance interventions with them, providing a reminder system for future events..
